

Brace versus Balance Board

Ankle sprain prevention; from evidence, via practice, to the athlete

VU University Medical Center Amsterdam, by Kasper Janssen

Contents

1. General Introduction
2. Ankle sprain prevention in randomised controlled trial (ABrCt): braces versus neuromuscular exercises for the secondary prevention of ankle sprains. Design of a randomised controlled trial.
BMC Musculoskeletal Disorders. 2011;12:210. doi:10.1186/1471-2474-12-210.
3. Interventions for preventing ankle ligament injuries (review).
Protocol accepted by the Cochrane Library, final review submitted.
4. Bracing superior to neuromuscular training for the prevention of self-reported recurrent ankle sprains: a three-arm randomised controlled trial.
British Journal of Sports Medicine. 2014 Aug;48(16):1235-9. doi:10.1136/bjsports-2013-092947.
5. The cost effectiveness of measures to prevent recurrent ankle sprains. Results of a 3-arm randomised controlled trial.
American Journal of Sports Medicine. 2014 Jul;42(7):1534-41. doi:10.1177/0363546514529642.
6. Interventions preventing ankle sprains; previous injury and high-risk sport participation as predictors of compliance.
Journal of Science and Medicine in Sport. 2015 Jun 16. doi: 10.1016/j.jsams.2015.06.005.
7. User survey of three different ankle braces in soccer, volleyball and running: which brace fits best?
Submitted.
8. General Discussion
